

Amendments to the Claims:

1. (Currently Amended) A luminescence device, comprising[:] a substrate, an anode disposed on the substrate, a plurality of organic layers disposed on the anode, which include at least a luminescent layer, an exciton diffusion prevention layer and an electron injection layer, and a cathode disposed on the electron injection layer,

wherein the exciton diffusion prevention layer and the electron injection layer include an oxygen absorbent, a first electrode disposed on the substrate, at least one organic luminescence function layer disposed on the first electrode, a second electrode disposed on said at least one organic luminescence function layer, and an oxygen absorbent disposed between the substrate and the second electrode.

2. (Currently Amended) A device according to Claim 1, wherein a voltage is applied between the anode and the cathode ~~first and second electrodes~~ to cause phosphorescence from ~~at least one layer constituting said at least one organic luminescence function layer~~ the luminescent layer.

3-4. (Cancelled).

5. (Currently Amended) A luminescence device array[ , ] comprising[:] a substrate[,] and a plurality of luminescence devices disposed on the substrate,  
wherein each luminescence device comprises a first electrode disposed on the substrate, at least one organic luminescence function layer disposed on the first electrode, a second electrode disposed on said at least one organic luminescence function

layer, and an oxygen absorbent, wherein a space is defined between a first luminescence device and a second luminescence device arranged next to the first luminescence device in one surface direction of the substrate, and an wherein the oxygen absorbent disposed between the first electrode and the second electrode is Mg and is disposed in the space.

6. (Currently Amended) A device array according to Claim 5, wherein a voltage is applied between the first and second electrodes to cause phosphorescence from at least one layer constituting said at least one organic luminescence function layer.

7. (Cancelled).

8. (New) A device according to Claim 1, wherein the oxygen absorbent is Mg.

9. (New) A device according to Claim 1, further comprising a sealing housing disposed on the substrate in order to cover the luminescence device, and a hygroscopic agent which is sealed in a space between the luminescence device and the sealing housing.

10. (New) A device according to Claim 1, wherein the hygroscopic agent is CaO powder.

11. (New) A device array according to Claim 5, further comprising a sealing housing disposed on the substrate in order to cover the luminescence devices, and a

hygroscopic agent which is sealed in a space between the luminescence devices and the sealing housing.

A  
12. (New) A device array according to Claim 11, wherein the hygroscopic agent is CaO powder.
